

The Republic of Rwanda

SEASONAL AGRICULTURAL SURVEY

2017
Season B

REPUBLIC OF RWANDA

NATIONAL INSTITUTE OF STATISTICS OF RWANDA P.O. Box 6139 KIGALI - RWANDA

September 2017

Seasonal Agricultural Survey (SAS)–2017 Season B

I. Introduction

National Institute of Statistics of Rwanda (NISR) uses Multiple Sample Frame as the methodology to conduct Seasonal Agricultural Surveys. Data collection covers all three agricultural Seasons in Rwanda as follows:

- Season A that starts in September and ends with February of the following year;
- Season B that starts in March and ends with June of the same year; and
- Season C that starts in July and ends in September of the same year.

The NISR has upgraded¹ Seasonal Agriculture Survey since November 2016 in order to provide more data and also to disaggregate them at district level (the number of secondary sampling units or segments was increased from 540 up to 960 segments). In addition paper based data collection method has been replaced by Computer Assisted Personnel Interviewing (CAPI) method which is thought to provide accurate data and facilitate quick reporting.

For Seasons A&B, data collection is subdivided into two phases. Phase 1 which is a screening of plots and allows area estimation, and Phase 2 which is yield and production estimations of the sample of the screened plots.

This is the preliminary report explains the methodology used and highlights some key findings on farm characteristics, agricultural inputs and agricultural practices from USAS 2017 B. An annual comprehensive USAS Survey report is to be published after covering all the three agricultural seasons.

II. Methodology

For collecting agricultural data, a Multiple Sample Frame was used, meaning that the NISR combines an Area and a List frame.

- a. An area frame using Satellite imagery (uploaded from Digital globe);
- b. A List frame of Large Scale Farmers.

¹From 2012 to 2016, a total number of 540 segments were spread throughout the country as coverage of the survey and results were at National level. The fieldwork consisted of screening land area on maps by classifying every plot inside each segment as either agricultural (cultivated and, pastures, and fallow land) or non- agricultural land (water, forests, roads, rocky and bare soils and buildings) and completing screening forms and farm questionnaires

The design of the Multiple Frame Survey (MFS) combined a probability sample of segments which were selected from the *Area Sampling Frame*, with a list of *Large Scale Farmers (LSF)* to be totally enumerated during the data collection period.

It starts with land stratification where total country land was delineated into 10 land use strata, Strata definition is based on land cover or land use characteristic and agriculture or livestock activity intensity and NISR is interested in 4 strata for the Agriculture Survey which are:

- 1.1 Intensive agriculture land on Hillside
- 2.0 Intensive agriculture land in wetlands
- 3.0 Rangelands area
- 4.0 Urban area and rural settlements²

Other strata are:

- 1.0. Tea plantations
- 5.0. Non crop land
- 6.0 Water bodies
- 7.0 National Parks
- 8.0 Uncultivated 'protected' marshlands
- 9.0 Forest and woodlands

Figure 1: Land use stratification

² Stratum 4.0 is used in the Household and Livestock Survey Module

The picture above shows how strata are spread in the country. Using satellite imagery, the whole country was stratified into homogeneous strata according to crop intensity and other land-use characteristics as follows:

Table 1. Stratified physical land for agriculture per district (Ha)

District Name	Tea plantation	Intensive cropland on hillsides	Intensive cropland in marshlands	Rangeland	Total
Nyarugenge	-	5,894.6	1,698.0	-	7,592.6
Gasabo	-	25,561.9	3,190.7	-	28,752.7
Kicukiro	-	7,597.3	2,686.2	-	10,283.5
Nyanza	-	53,698.6	6,302.5	-	60,001.1
Gisagara	-	48,939.5	11,095.9	-	60,035.4
Nyaruguru	3,531.7	43,598.2	3,674.0	-	50,803.9
Huye	-	39,249.1	6,358.0	1,051.5	46,658.6
Nyamagabe	6,217.8	50,410.8	3,402.8	-	60,031.4
Ruhango	-	52,253.8	4,985.6	-	57,239.4
Muhanga	-	49,946.6	1,955.5	-	51,902.1
Kamonyi	-	52,483.8	5,816.4	-	58,300.2
Karongi	6,682.8	55,904.7	799.4	-	63,386.8
Rutsiro	1,652.2	50,755.4	505.1	3,613.3	56,526.0
Rubavu	411.7	26,886.6	-	822.2	28,120.5
Nyabihu	1,780.3	37,199.4	801.9	2,691.3	42,473.0
Ngororero	1,472.3	51,198.6	914.3	3,910.9	57,496.1
Rusizi	953.5	38,535.1	3,069.1	-	42,557.7
Nyamasheke	7,549.0	44,064.1	2,371.1	-	53,984.2
Rulindo	1,528.5	41,718.2	1,861.0	-	45,107.7
Gakenke	-	56,044.5	1,489.5	-	57,534.0
Musanze	7.5	33,596.6	1,096.9	-	34,701.0
Burera	-	44,013.0	1,459.7	-	45,472.7
Gicumbi	2,475.5	61,872.1	1,674.2	-	66,021.8
Rwamagana	-	55,324.6	3,235.5	-	58,560.2
Nyagatare	-	62,330.9	8,108.5	91,762.0	162,201.3
Gatsibo	-	71,583.4	4,786.9	12,813.8	89,184.1
Kayonza	-	64,327.7	3,156.7	46,806.1	114,290.4
Kirehe	-	66,696.0	10,604.4	15,350.6	92,650.9
Ngoma	-	68,594.0	8,088.6	-	76,682.6
Bugesera	-	87,766.1	21,253.1	-	109,019.2
Total Agricultural land	34262.8	1448045.5	126441.3	178821.6	1787571.2

2017 Seasonal Agricultural Survey - Season B

The stratification is based on “Eye interpretation” of aerial images. Those images are orthophotos imagery from the National land Center (2008) and Satellite images (world view) from Digital Globe (2010-2016). A number of PSUs is assigned to each strata given its weight (Probability Proportional to Size) in every district.

At District level, every “Agriculture stratum” (1,2 and 3) is divided into Primary Sampling Units (PSUs) of 100 Ha (in strata1.1 and 2.0) and to 500 ha (in stratum 3). Strata are then broken into PSUs following visible boundaries and each PSU is given a unique PSU identity number (PSUID).

Figure 2: Construction of PSUs (Example of Nyagatare District)

A systematic sampling method selects a certain number of PSUs in each District then every PSU is divided into Secondary Sampling Units (SSUs) of around 10 Ha for strata 1.1 and 2.0 and around 50ha for stratum 3.0, randomly one SSU is selected and called a Segment.

Figure 3: Construction of SSUs (Example of Nyagatare District)

One segment average size is 10,000 Sq. Meters. That area is equal to 1000 grids squares of 100 Sq Meters each. (A grid is a geographical located landmark in the segment having a distance of 10 Meters with the following grid).

A random sample of 5% of the total grids was selected for screening in each segment making a total of 51,390 grids countrywide.

A sampled point is placed at the center of every squared grid. On the field, the enumerator identify which plot the point is falling in, measure it with mapping application in a tablet and record land use and crops using a tablet.

Figure 4: Segment map with grid points

NISR has carried out 2017USAS B from March 2017 to June 2017. A total number of 51,390 sampled grids gave a total number of 32,277 plots countrywide in phase 1 of screening and then a subsample of 12,156 plots was selected in cultivated plots of screening during Phase 2 mostly designed for inputs and production data collection.

Furthermore, enumerated Large Scale Farmers in screening phase were 201 in 2017 Season B and only 195 had been interviewed during the Second Phase.

III. Findings

This is the USAS 2017 B report highlighting the key results in farm characteristics. Agricultural inputs, Agricultural practices.

1. Farm characteristics

- ***Crop Land***

The main crops grown in 2017 Season B were legumes and pulses (28.2%) followed by tubers and roots (26.8%) then Bananas (18.9%) and cereals (18.7%), (see Table 6).

- ***Crop Production***

In 2017 Season B, most of the crops underwent increased production. Among others Irish potatoes increased by 29%, Bush beans by 28%, Maize by 16% and Paddy rice by 4% by comparing with 2016 season B production (see Table 10).

2. Agricultural Inputs

- ***Use of seeds***

In 2017 Season B, For small scale farmers or segment level plots, 95.4% were used with traditional seeds while 4.6% of them were used with improved seeds. For Large Scale

Farmers, 59.7% used traditional seeds whereas 40.3% used improved seeds (see Table 20).

- ***Use of fertilizers***

In 2017 Season B, for small scale farmers or segment level plots, 34.7% were used with organic fertilizers while inorganic fertilizers were used by 15.1%. For Large Scale Farmers, the use of organic fertilizers and inorganic fertilizers was 32.7% and 32.5% respectively (see Table 26 & 28).

- ***Use of pesticides***

In 2017 Season B, The percentage of segment plots which were used with pesticides is 11.7% and 31.8% for Large Scale Farmers (see Table 32).

The percentage of different type of pesticides used is led by Cypermethrin both for segment plots and Large Scale Farmers using a share of 36.1% and 26% respectively (see Table 34).

3. Agricultural practices

- ***Irrigation practices***

In 2017 season B, irrigation was practised in 4.6% of all segment plots while it was 20.7% of all Large Scale Farmers (see Table 36).

- ***Anti-erosion activities***

In 2017 season B, For segment plots, 64.4 % practised anti-erosion activities. On the hand, the Large Scale Farmers who practised anti-erosion activities were 56.6 % (see Table 44).

An annual detailed USAS 2017 report is to be published after covering all the three agricultural seasons.

ANNEX

MAIN TABLES

Table 2: Share (in percentage) of area occupied by strata within districts

District	Tea plantation	Intensive cropland on hillsides	Intensive cropland in marshlands	Rangeland	Total
